

Ultimate 32-Inch TV Buying Guide | Plus Top Five in Singapore!

Buying a 32-inch TV in Singapore for your apartment is all about suiting your needs. If you're the practical type who wants entertainment without bells and whistles, buy the cheapest one. If you like something that can boost your room's aesthetics, you can't go wrong with the borderless TV. If color accuracy matters to you, have a go at Samsung's 32-inch television.

Factors to consider in buying 32-Inch TV

- 1. Screen Resolution** - screen resolution is the number of horizontal and vertical pixels on display. The higher the number, the more pixels; and the more pixels, the sharper the image. Hence, if you have a 32-Inch TV in Singapore but is in HD, it will show higher quality images than a 55-Inch HDTV. size is not always accurate. Size is more of a classification. If a TV claims that it is 32 inches or 55, it is only stating its category. Sometimes, it can be short or more than half an inch. But to keep things simple, manufacturers merely label them as 32, 40, 42, and onward. But, hey, what's half an inch or two.

- High definition (HD)** / 921,600 pixels / 720p lines of Resolution / This resolution has two times greater than that of an analog TV.
- Full HD** / 2.1 million pixels / 1080p lines of Resolution / HDTVs with twice the resolution of standard HD, even on smaller screens.
- 4K UHD** / 8 million pixels / 2160p / Any screen size can benefit from superior pixel power, which provides four times the resolution of HD.
- 8K UHD** / 33 million pixels / 4320p / Extraordinary high-definition on large screens thanks to an incredible 33 million pixels.

2. LED or OLED?

- LED TVs give a more vibrant image. It also has a better dynamic range with more pronounced blacks compared to basic LCDs. Apart from that, LED TVs are more eco-friendly.
- OLED screens are more color accurate. They also have better contrast, wide viewing angles, and a picture that is virtually free of blurring. The only disadvantage is that they are still significantly more expensive.

3. Refresh Rate

- The number of times an image is refreshed per second. This aspect can get pretty complicated, so we'll just cut it short. The standard refresh rate today is 60 Hz. When buying your 32-inch TV in Singapore, make sure that you avoid any TV with a refresh rate lower than 60 Hz.
