About Us

Incrediwear products increase circulation to reduce inflammation & swelling, relieve pain, restore mobility, and accelerate recovery. Unlike compression products, Incrediwear products do not need to compress to work.

Instead, our technology incorporates semiconductor elements within our fabric that releases negative ions when stimulated by body heat. The negative ions activate cellular vibrations that increase blood flow and speed.

Increasing circulation helps bring more oxygen and nutrients to the target area, which optimizes the body's natural healing process and accelerates post-operative recovery.
