

# Common Risks of Space Heaters

Sometimes, improper or unsafe use of space heaters can lead to house fires and even, in extreme circumstances, death. However, the use of space heaters has not declined. Therefore, it is crucial to understand the risks and know how to use a space heater in your home safely.

## What Are Space Heaters?

[Space heaters](#) are appliances intended to heat small- to medium-sized rooms. Their general purpose is to supplement the primary heating system in a house or building.

There are various types, sizes, and shapes of space heaters available. Some run on electricity, while others utilize natural gas or propane fuels. In addition, the method of spreading heat varies with some space heaters using radiation and others convection.

Now that you know what a space heater is, let's discuss how to use them safely.

## Space Heater Safety Tips

Follow these space heater safety tips to ensure that your family and your home remain safe:

- Ensure your unit has a tip-over safety switch that automatically shuts off the heater if it gets knocked over. Remember that taller units are more likely to tip over.
- Do not use a space heater in rooms where moisture is present, such as bathrooms or kitchens.
- Ensure your space heater has a seal for nationally recognized safety testing, such as UL (Underwriters Laboratories) or CSA (Canadian Standards Association).
- Place the heater on a level surface, away from foot traffic, and keep it at least three feet away from walls and any combustible materials (upholstered furniture, mattresses, bedding, clothing, curtains, etc.)

## Stay Safe with the Help of Canadian Wire Wizards

Our experienced professionals at [Canadian Wire Wizards](https://www.canadianwirewizards.ca/) will make sure that your circuits are equipped to handle your heating needs. We will also install additional electrical outlets if required. Call us today at 416-755-2700 or contact us via our [online form](#) to discuss how we can make your home electrically safe and sound.
