IS PREGNANCY GETTING PREVENTED BY MIFEPREX?

No. This pill doesn't use to prevent pregnancy. You can [buy Mifeprex Abortion Pill online](#) as the most used and best pregnancy termination pill. It is utilized for the termination of pregnancy at home. For pregnancy prevention, you must have to use the emergency contraception pill. There is lots of birth control pill available.

WHEN MAY I TAKE MIFEPREX WHILE PREGNANT?

When you decided to do an abortion that time you can use this early pregnancy termination pill. But you can use this Abortion Pill for up to 49 days or within 7 weeks of pregnancy. This time period is calculated based on your last menstrual period.

DOES MIFEPREX WORK 100% FOR PREGNANCY TERMINATION?

No. This pill ends the pregnancy effectively/successfully till 93-98%. And the rest of 2-7% of women may need to undergo a surgical abortion procedure. This surgical abortion procedure needs to remove early unwished pregnancy or to stop heavy bleeding.

IS THE LOCAL MEDICAL STORE CARRYING MIFEPREX?

No. You can purchase Mifeprex Abortion Pill online USA at a clinic or hospital. Or also you can get it from an authorized health care expert.

USES RATE OF MIFEPREX IN THE USA

As per the last 5 years' study, after approval of this pregnancy termination pill uses by the FDA more than 4 million women use Mifepristone Abortion Pill to end a pregnancy.

WHAT IS RU486?

RU486 is also a brand like Mifeprex which also contain Mifepristone 200mg as an active element. Both of these medicines are used for getting an abortion at home by self.

IS THE ABORTION WITH MIFEPREX COVERED IN THE MEDICAL INSURANCE POLICY?

The surgical abortion process is covered in the Medclaim policy. Whether the medical abortion is covered or not that part you have to check with your medical insurance company. Each and every company has different terms and conditions. Some policy covers medical abortion in claim some are not.

IS THERE IS BLEEDING AFTER THE USE OF THE MIFEPREX PILL?

Yes. You may feel abdomen pain, i.e. cramping and vaginal bleeding after the intake of Mifeprex. These 2 symptoms are signs of aborting process getting started properly. But there is a rare chance that you may get pregnant after intaking this Mifepristone pregnancy termination pill and suffering from cramps and bleeding. So that's why you just have to keep in touch with your health care expert after intaking Mifepristone.

If there is such a situation occurs, then your health care expert provides some extra medicine for intake to terminate pregnancy i.e. Misoprostol. You must have to take Misoprostol after 24-48 hours of intake of Mifepristone. After intake of Misoprostol, you surely get bleeding/spotting. This bleeding remains for 1 to 2 weeks after completion of a process. This can be continued for 1 month. You may feel heavy bleeding or normal bleeding similar to a monthly period. You may notice blood clots, which indicate the removing tissue from the body.

IS THE AGE FACTOR MATTER WHILE USING MIFEPREX?

No. There is no restriction to use this pregnancy termination pill based on age. As per FDA, anyone can use it who wishes to terminate an unwanted pregnancy. But some countries and states banned the use of the Abortion pill to terminate a pregnancy. So, check out the rules and regulations of the country while using it.

HOW OFTEN DO I GET PREGNANT AFTER TAKING MIFEPREX?

You can get pregnant immediately after completion of the medical abortion process with the help of Mifepristone Abortion Pill. So, to avoid unwanted pregnancy again you must have to use an emergency contraceptive.

To get more about emergency contraceptive intake check out the below-mentioned link. Here you get details information about how use emergency contraceptive and also get details info about when to use it.
