

Fix: Windows 10/11 Update Error Code 0x80096004

Error code 0x80096004 typically indicates that there is an issue with the digital signature of a file or application. When you encounter this error code [Windows 10 Update Error Code 0x80096004](#), it means that Windows is unable to verify the digital signature of the file or application, which can prevent it from being installed or executed.

Corrupted or missing system files: If important system files are corrupted or missing, this can prevent Windows from verifying digital signatures.

Malware or virus infections: Malware or virus infections can modify system files, which can cause issues with digital signatures.

Third-party security software: Some third-party security software can interfere with Windows' ability to verify digital signatures.

To resolve this error code, you can try the following troubleshooting steps:

To run the Windows Update, troubleshoot:

- Open the System device and go to the start menu.
- Type the manage panel from the search Area.
- Here we go to click on to system device and safety after that go to click on to system device.
- Open to new window and go to click on system settings.
- After that, open the system properties windows troubleshoot and open the hardware and go for click on on system device set up setting.
- At last, open the window newly and click on to particular choice and save modifications.

Run a virus scan: Use a reputable antivirus program to scan your system for malware or viruses. If any are found, remove them.

Perform a system file check:

Use the System File Checker tool to scan for and replace any corrupted or missing system files.

SFC (System File Checker) is a built-in Windows utility that allows you to scan, and repair corrupted or missing system files.

- Open the Command Prompt as an administrator.

- You can do this by typing “cmd” in the Windows search bar, right-clicking on “Command Prompt,” and selecting “Run as administrator.”
-
